

PRELIMINARY AMENDMENT

Serial Number: 08/991,143

Filing Date: December 16, 1997

Title: METHODS TO TREAT UNDESIRABLE IMMUNE RESPONSES

Page 2  
D.I.: 600.423US1

production which is] specific for a particular antigen, comprising: administering to the respiratory tract of a mammal afflicted with, or at risk of, the indication or disease a dosage form comprising an amount of at least one epitope peptide, a variant thereof or a combination thereof, wherein the administration of the dosage form is effective to suppress, tolerize or inhibit the priming or activity of, CD4<sup>+</sup> T cells which are associated with antibody production, in [of said mammal] mammals having divergent immune response haplotypes, wherein the CD4<sup>+</sup>T cells are specific for the antigen, wherein the sequence of the epitope peptide comprises a universal, immunodominant epitope sequence, and wherein the peptide comprises less than the sequence of the antigen.

(Amended) The method of claim [1 or 3] 2 wherein the antigen is an endogenous antigen.

(Amended) The method [1 or 3] 2 wherein the antigen is an exogenous antigen.

(Amended) The method of claim [2 or] 8 wherein the antigen is an exogenous antigen.

(Amended) The method of claim [2 or] 8 wherein the antigen is an endogenous antigen.

(Amended) The method of claim [1 or] 2 wherein the mammal is a human.

(Twice amended) The method of claim [1 or] 2 wherein the antigen is an exogenous antigen from a domestic cat.

(Twice amended) A method to tolerize a [mammal] human to an endogenous antigen associated with aberrant, pathogenic or undesirable antibody production in the [mammal] human, comprising: administering to the respiratory tract of the [mammal] human at least one epitope peptide, a variant thereof or a combination thereof, having a universal immunodominant epitope sequence, wherein the administration is [in an amount] effective to tolerize [the mammal] CD4<sup>+</sup> cells which are associated with antibody
